CAMS for MS "...nothing short of a miracle."

Scooter for Sale
no longer required

Mitzi Bowen has had Multiple Sclerosis (MS) for 29 years. In 1995 her condition began to slowly deteriorate (typical of the progression of MS). She eventually lost

used *that light* each week during my appointment. I remember saying to my mother, when she noticed how much improvement I had made, 'I think it's that silly light!'"

Six months after weekly treatments with the CAMS technology, Mitzi can tie her shoes and open bottles again. "I have full function of my hands and I am starting to feel normal again, she declares."

Mitzi's progress took a real jump recently when she began to leave her scooter behind. Ed remembers the first time he watched her walk with a walker to his office door. "I couldn't believe it," he says. "I looked out the window and watched her come up the sidewalk. That's when I knew we were really making progress."

For Mitzi, CAMS technology has changed her life. Her next goal is to walk on her own - without the walker. Both she and Ed believe it is possible.

"I have no idea how that thing works, says Mitzi, but for me, it has been nothing short of a miracle."

fine motor control in her left hand and for several years, she has used a battery-powered scooter to get around. Over the last 6 months all that has changed.

"Exercise and physical therapy help," says Mitzi, "but when my physical therapist [Ed Lundgren] began to use a CAMS device during my sessions, I started to make unexpected improvement."

Ed Lundgren is a progressive physical therapist who understands the latest advances in energy medicine. He knows not everyone is ready to accept these technologies, so his approach is subtle. In Mitzi's case, he simply asked whether she was OK if he used light therapy.

"As a pharmacist, I've been trained to be skeptical. All I wanted to know was if it would hurt," laughs Mitzi. "When Ed assured me it was completely non-invasive, I shrugged my shoulders and said okay. Then as the weeks passed and he continued to use the light, I started to notice improvement. I made sure he
