Telomere Pilot Study: results are in!

In 2009, I began to review promising research indicating that the resonant frequencies of healthy chromosomes could be used to re-grow telomeres. I knew these same frequencies could be delivered via the CAMS technology. I developed an adaptation to one of our CAMS units and over the next couple of years, we tested and fine-tuned the concept. Our initial results were just as promising as those from the original research.

Telomere is the term used for the genetic material at the end of each strand of DNA. As we age, telomeres get shorter and the body produces cells that are less efficient and weaker. The shorter our telomeres, the "older" our cells. Yet research shows that by slowing the loss of telomeres, we can extend our lifespans and feel younger longer.

In 2012, we began to gather a group of individuals who were interested in participating in a pilot study. We provided each participant with a CAMS RJV Jr. (named for its rejuvenating

effects) and instructions to use the unit twice a day for 15 minutes. *Before* and *After* blood tests confirmed positive results. Everyone who completed the study showed improvement (see graph). One participant completed her PhD during the study -- at the age of 59! (#3). Here's what two of the other participants had to say about their experience:

I had used the PulseCam every day for 2 years before I began the telomere study. I had made constant, slow progress, but when I started using the RJV Jr., my progress took a noticeable leap. Telomere tests show I have gone from the 9th to the 49th percentile. I feel great! ...better than I have felt in a very long time. (#4)

Within the first week, I noticed improved focus and clarity as well as better sleep. Over the next few months, my stamina, strength, and endurance steadily improved. I used to be a chronic dieter -- always hungry. Now I am eating normally; I don't pay attention to calories and yet I am slowly losing weight. The only thing I can figure is that my DNA must be idling faster! (#5)

Dr. Crosby will be presenting the results of the Pilot Study at the upcoming Tesla Conference in Albuquerque, NM; July 29-Aug 2.
