CAMS -- when all else fails

Dolores Livingston

In 1977 Dolores Livingston had surgery to remove and prevent the spread of breast cancer. For 28 years she remained cancer free. Then suddenly she developed excruciating pain in her back. Within weeks she could not stand.

During a two week hospital stay, she was told that the cancer had reached Stage IV, moving into her back, hips and ribs. Several discs were completely compromised.

Before being sent home, Dolores received 6 rounds of

radiation in a desperate attempt to confine the cancer. Only morphine would control the pain.

"I was completely helpless when I returned home," says Dolores. "My children fed and bathed me. I found out later they thought they had brought me home to die." But Dolores was convinced God had other plans for her. She was introduced to a nutritional supplement and to CAMS Therapy.

"To this day, I do not understand the science behind the TensCam, says Dolores, but I know it works." Treating herself on a daily basis, she gradually began to improve. "I might have noticed the improvement more if I had not been on so much morphine," says Dolores. "But one day during a wheelchair transfer, I was able to move my legs, rather than having to pick them up."

Working with a physical therapist, she began to stand-and then to walk. Four months after the original diagnosis, a PET scan showed no cancer.

Today, six and a half years later, Dolores still uses the TensCam on a daily basis. "I call it my zapper," she says enthusiastically. "It helps with arthritic pain too."

Dolores is on the Board of Directors for a ministry called Back to Jerusalem. She has made 8 international trips since her recovery and wishes to give God the credit. "I had the faith; He guided me to the tools."

New Book explains CAMS Science!

Beyond Pills, Knives and Needles

by Dr. Charles Crosby

A complete description of the science that supports CAMS technology; The nature of interference fields and how to locate them; How to use any of the CAMS devices to treat a wide variety of symptoms.

Ask Dr. Crosby

When a surgeon says, "We got it all." What does that really mean?

Doctors do all they can to remove cancerous tissue during surgery, but, when an interference field remains, the problem is likely to return. In Dolores' case, surgery bought her 28 good years. Use of the TensCam resolved the interference field, and supported healing that is unheard of according to medical standards. There are two chapters on the nature and treatment of interference fields in my new book. [Buy the book](#)
