## LaserCam for Man's Best Friend

"We have no way to explain the healing," says Michelle Byrd, owner of a dog named Skeeter and a beloved family

pet, "other than to say that the LaserCam is an amazing device. We are in awe and gratitude."

Skeeter (pictured), is a 1-year-old male dog that the Byrd family raised from a puppy. He was recently hit by a car. According to witnesses, Skeeter was thrown 50 feet. Older children at the scene of the accident stayed with the immobilized dog till he could be carried to a vehicle where he was transported to an animal hospital.

"We were not given much hope," recalls Michelle. "The vet examined Skeeter and told us he had a likely pelvic fracture and other possible injuries."

Skeeter was unable to use his back legs. According to the vet, intervention would require surgery and a long recovery. "We just didn't think it was feasible--or fair for the dog," says Michelle. "We agreed to leave him overnight in the hospital which would give us time to talk with the children and make a decision." Skeeter was given medication for the pain and then a LaserCam was set to treat the dog during the night.

The next morning, everyone was in for a surprise. "When we arrived at the animal hospital, Skeeter ran to me and jumped up putting his paws on my shoulders with all his weight on those back legs. I just about fell over; not because of the dog's weight, but because I couldn't believe it," exclaims Michelle.

The Family took the dog home that morning--playful and frisky as ever! No further complications.

"I'm a registered nurse," says Michelle. I work in the emergency room. I wish more doctors knew about the CAMS technology. We're just happy Skeeter got that LaserCam treatment."

### Ask Dr. Crosby

**Q: Can you explain the reason animals sometimes respond to CAMS therapy better than humans?**

**A:** The CAMS technology works at the level of quantum physics where our beliefs and intentions also play a role. Doubt (practitioner or patient) creates a disruption in the information delivered through the CAMS devices. This can diffuse or nullify the result. In the case of animals, there are no beliefs about what is possible (or not possible) to influence the work. Veterinarians are some of our most successful CAMS users. This concept is discussed in greater length on pages 41 and 42 of the book, *Beyond, Pills, Knives & Needles*.
