CAMS Technology for Paralysis

Erick Michael considers himself to be a fortunate man - especially since his physical therapist began using CAMS technology.

In 2000, Erick had a bicycle accident that left him completely paralyzed from the chest down. Years of rehabilitation have allowed him to be independent in a wheelchair but the possibility of ever walking again seemed remote. "I had a year of laser acupuncture in France," says Erick. "It helped with trunk balance and I got some feeling back."

Then, fortunately for Erick, he connected with Edward Lundgren, a physical therapist who began using a TensCAM in his practice in January of 2011. "One of the first things I noticed after we began using the TensCam," says Erick, "was that my balance improved, considerably. I could bend over and bring myself back up without using my arms. Now I can bend over and pick things up off the floor from my wheelchair. That was never possible before."

But even more significant is the possibility that Erick might walk, on his own, again. Erick has had what are known as long braces or *kafo* braces for over ten years. He could stand, but not walk. Now, he can walk with the braces using a rolling walker. In a pool, he can walk without the braces!

"So many new possibilities have surfaced since we began using the TensCam," says Erick. "I have made progress that was not possible in over ten years. I have sensation to deep pressure all the way to my knees now and I can also roll over in bed for the first time since my accident."

Edward A. Lundgren is a progressive therapist. When he learned about the CAMS technology he

immediately knew it was something that could help a lot of his patients. His work with Erick has been one of the most rewarding experiences of his career. "In 42 years as a physical therapist, my work with Erick has been the most noteworthy, remarks Ed. "The CAMS technology is a significant breakthrough in rehabilitation therapy."

New Book about CAMS Technology

Beyond Pills, Knives and Needles by Dr. Charles Crosby includes: A complete description of the science that supports CAMS technology ;The nature of interference fields and how to locate them; How to use any of the CAMS devices to treat a wide variety of symptoms.

Ask Dr. Crosby

Does CAMS therapy help with Alzheimer's and Dementia-type symptoms?

As documented in the new book, ***Beyond Pills, Knives and Needles***, every physical condition is the result of a disturbance in the energy field. Correcting that disturbance is the first step toward returning health. Early trials using the LaserCam show good results with noticeable improvement in Alzheimer's symptoms. These results have been attained with longer treatments using the LaserCam which does not have a timer. LaserCam treatments can be for any duration.
